

SIKALASTIC RAPID PMMA

Sikalastic Rapid Flashing and Deck Membrane

Is a high performance two-component, fast-curing, polymethyl methacrylate (PMMA) resin used to form an extremely durable, seamless, fully reinforced watertight membrane with a fast curing time.

In flashing applications (**Sikalastic Rapid 724**), it is extremely adaptable to complex roof penetrations, tight clearances, irregular shapes and details, or other conditions that would be difficult for standard flashing systems.

It can also be used as a reinforced waterproofing membrane (**Sikalastic Rapid 724**) for use on applications such as balconies, terraces, plaza decks, planters, fountains, pools and more. This system is versatile and can be used in a wide spectrum of end uses, from pedestrian traffic to under tiles or concrete pavers.

TYPICAL USES

- Complex flashing conditions
- Deck renovation applications
- New construction applications
- Projects with limited accessibility such as balconies
- Plaza and pool decks
